

Case Study

Journey To The Multicloud Management Platform

Challenges:

- The customer required management of disparate Infrastructure and performance enhancement.
- They wanted to ensure maximum uptime and secure the Infrastructure for applications and systems.
- The customer wanted to create customer delight and amplify the infrastructure efficiency.

Solutions:

- We integrated disparate data centers of the customer using UnityOneCloud for smarter management and monitoring of servers and network equipment.
- We offered 24x7x365 Expert Hands and 15 Minute Response time.
- We set up security protocols and provided CIS hardening and Next-Generation Firewalls to secure data in transit and rest.
- We delivered a comprehensive single pane of glass to manage, monitor, observe their entire Infrastructure remotely.

Customer Benefits:

- UnityOneCloud amplified the security of customer's data center by continuous scanning and proactive remediation of all systems as per CIS standards.
- We provided a unified single pane of glass for comprehensive Data Center Management along with an Enterprise-Grade Security.
- UnityOneCloud helped to enhance customer's data center efficiency and achieved the RPO of 15 mins and RTO of 2 hours.
- The customer now has an improved capacity planning for two data centers significantly monitored through UnityOneCloud.

The UnityOneCloud Advantage

UnityOneCloud is a Multicloud Management SaaS Platform for managing your Real Hybrid Cloud Environment including Data Centers, Power Distribution Units (PDUs), Bare-Metal servers, Networking Devices, Private Clouds (VMware, HYper-V, and OpenStack), and Public Clouds (AWS, GCP, and Azure)
