DISCOVERY & TOPOLOGY

Find every device and see how it all connects

Agentless discovery builds a complete, current inventory and a live topology across data centers, private clouds and public clouds.

Discovery scan of a subnet: every device with make, model, OS and version.

No agents to install
Discover with standard protocols and APIs.

Always current
Policies onboard and update devices as they change.

Hybrid by design
Data centers, private clouds and public clouds on one map.

WHAT YOU CAN DO

Key capabilities

Agentless discovery
SNMP v1/v2c/v3, REST/API, Redfish, SSH, WMI, and LLDP/CDP for topology.

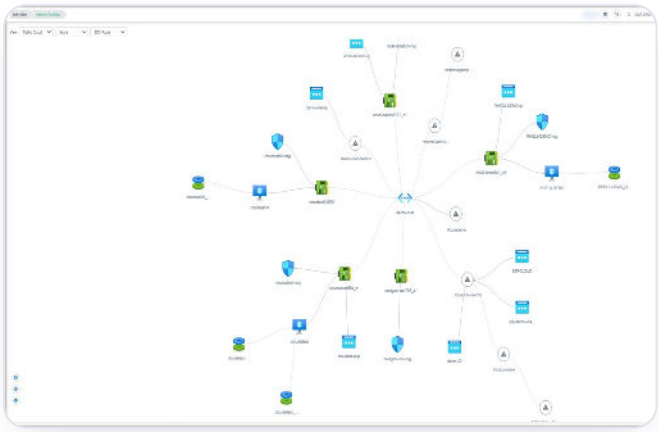

Discovery policies
Onboard, place in a cabinet and start monitoring new devices automatically.

Data center topology
See every device and link, with problems shown in red.

Private & public cloud maps
VMware, Nutanix and other private clouds, plus Azure networks.

Data center topology

Azure network topology

WHY IT MATTERS

Accurate inventory
Asset records stay aligned with your CMDB, such as ServiceNow.

Faster troubleshooting
See dependencies and find the root cause sooner.

Safer changes
Know what a change will touch before you make it.
